Memory and Healing Soren R. Ekstrom, 2018-05-01 This book addresses the current demand to apply findings in neuroscience to a broad spectrum of psychotherapy practices It offers clear formulations for what has long been missing in how psychotherapists present their work research based descriptions of specific memory functions and attention to the role that synaptic plasticity and neural integration play in making lasting psychological change possible The book provides a detailed perspective on how patients integrate into their own narratives what transpires in their treatment and how the clinician s memory guides the different phases of the process of healing Long neglected in psychotherapeutic formulations findings about memory in particular episodic and autobiographical memory have a direct bearing on what happens in treatments Whether the information is about the recent past such as what happened between

sessions or about traumatic childhood experiences the patient's disclosures are in the service of a more complete narrative about self. At the same time the therapist's ways of remembering what occurs in each therapeutic relationship will guide much of the healing process for the patient. *Essentials of Cognitive Neuroscience* Bradley R. Postle, 2020-05-27 *Essentials of Cognitive Neuroscience* introduces and explicates key principles and concepts in cognitive neuroscience in such a way that the reader will be equipped to critically evaluate the ever growing body of findings that the field is generating. For some students this knowledge will be needed for subsequent formal study and for all readers it will be needed to evaluate and interpret reports about cognitive neuroscience research that make their way daily into the news media and popular culture. The book seeks to do so in a style that will give the student a sense of what it's like to be a cognitive neuroscientist when confronted with a problem: how does one proceed? How does one read and interpret research that's outside of one's sub area of specialization? How do two scientists advancing mutually incompatible models interrelate? Most importantly, what does it feel like to partake in the wonder and excitement of this most dynamic and fundamental of sciences.
