## **Fields And Rings Chicago Lectures In Mathematics Series:**

**Fields and Rings** Irving Kaplansky, 1972 This book combines in one volume Irving Kaplansky's lecture notes on the theory of fields ring theory and homological dimensions of rings and modules In all three parts of this book the author lives up to his reputation as a first rate mathematical stylist Throughout the work the clarity and precision of the presentation is not only a source of constant pleasure but will enable the neophyte to master the material here presented with dispatch and ease A Rosenberg Mathematical Reviews *Lectures on Modules and Rings* Tsit-Yuen Lam, 2012-12-06 Textbook writing must be one of the cruelest of self inflicted tortures Carl Faith Math Reviews 54 5281 So why didn't I heed the warning of a wise colleague especially one who is a great expert in the subject of modules and rings The answer is simple I did not learn about it until it was too late My writing project in ring theory started in 1983 after I taught a year long course in the subject at Berkeley My original plan was to write up my lectures and publish them as a graduate text in a couple of years My hopes of carrying out this plan on schedule were however quickly dashed as I began to realize how much material was at hand and how little time I had at my disposal As the years went by I added further material to my notes and used them to teach different versions of the course Eventually I came to the realization that writing a single volume would not fully accomplish my original goal of giving a comprehensive treatment of basic ring theory At the suggestion of Ulrike Schmickler Hirzebruch then Mathematics Editor of Springer Verlag I completed the first part of my project and published the write up in 1991 as *A First Course in Noncommutative Rings* GTM 131 hereafter referred to as First Course or simply FC Pure and Applied Science Books, 1876-1982, 1982 Over 220 000 entries representing some 56 000 Library of Congress subject headings Covers all disciplines of science and technology e g engineering agriculture and domestic arts Also contains at least 5000 titles published before 1876 Has many applications in libraries information centers and other organizations concerned with scientific and technological literature Subject index contains main listing of entries Each entry gives cataloging as prepared by the Library of Congress Author title indexes **Advances in Ultrametric Analysis** Alain Escassut, Cristina Perez-Garcia, Khodr Shamseddine, 2018-03-26 Articles included in this book feature recent developments in various areas of non Archimedean analysis summation of adic series rational maps on the projective line over non Archimedean Hahn Banach theorems ultrametric Calkin algebras modules with a convex base non compact Trace class operators and Schatten class operators in adic Hilbert spaces algebras of strictly differentiable functions inverse function theorem and mean value theorem in Levi Civita fields ultrametric spectra of commutative non unital Banach rings classes of non Archimedean  $K$  the spaces adic Nevanlinna theory and applications and sub coordinate representation of adic functions Moreover a paper on the history of adic analysis with a comparative summary of non Archimedean fields is presented Through a combination of new research articles and a survey paper this book provides the reader with an overview of current developments and techniques in non Archimedean analysis as well as a broad knowledge of some of the sub areas of this exciting and fast developing
