 FMC The first aim of the committee was achieved with the publication of a comprehensive state of the art report entitled
 Fracture Mechanics of Concrete edited by F H Wittmann Elsevier 1983 At that time research activities were concentrated
 essentially on the application of classical concepts of fracture mechanics to concrete However it has often been questioned if
 fracture mechanics can be applied to describe failure of concrete and a new approach has been developed which is
 particularly suitable for finite element analysis In this concept fracture toughness is replaced by fracture energy and thus the
 descending branch of the stress strain diagram can be taken into consideration As can be seen from the annotated
 bibliography covering the years 1982 to 1985 included in this volume many papers are still based on classical linear elastic
 fracture mechanics while others have adopted the concept of fracture energy
