Distributed Control And Filtering For Industrial Systems Iet Control Engineering:

Distributed Control and Filtering for Industrial Systems Magdi S. Mahmoud, 2013 In recent years technological advancements in the design and fabrication of integrated circuits have led to the development of cost effective low power thumb size devices that can be used for sensing actuating communication and computing This trend is enabling a surge of new applications for which pervasive network architectures are being developed A key feature of these systems is that they are decentralized and communication among different subsystems may be unreliable From an engineering viewpoint to ensure correct operation the theoretical analysis requires a fundamental paradigm shift as many of the typical assumptions of systems and control theory cease to hold Control and Optimization of Distributed Generation Systems Magdi S. Mahmoud, Fouad M. AL-Sunni, 2015-05-14 This text is an introduction to the use of control in distributed power generation It shows the reader how reliable control can be achieved so as to realize the potential of small networks of diverse energy sources either singly or in coordination for meeting concerns of energy cost energy security and environmental protection The book demonstrates how such microgrids interconnecting groups of generating units and loads within a local area can be an effective means of balancing electrical supply and demand It takes advantage of the ability to connect and disconnect microgrids from the main body of the power grid to give flexibility in response to special events planned or unplanned In order to capture the main opportunities for expanding the power grid and to present the plethora of associated open problems in control theory Control and Optimization of Distributed Generation Systems is organized to treat three key themes namely system architecture and integration modelling and analysis and communications and control Each chapter makes use of examples and simulations and appropriate problems to help the reader study Tools helpful to the reader in accessing the mathematical analysis presented within the main body of the book are given in an appendix Control and Optimization of Distributed Generation Systems will enable readers new to the field of distributed power generation and networked control whether experienced academic migrating from another field or graduate student beginning a research career to familiarize themselves with the important points of the control and regulation of microgrids It will also be useful for practising power engineers wishing to keep abreast of changes in power grids necessitated by the diversification of generating methods Fault Diagnosis for Electric Power Systems and Electric Vehicles G. Rigatos, M. Abbaszadeh, M.A. Hamida, P. Siano, 2024-10-30 The present monograph offers a detailed and in depth analysis of the topic of fault diagnosis for electric power systems and electric vehicles First the monograph treats the problem of Fault diagnosis with model based and model free techniques Model based fault diagnosis techniques and Model free fault diagnosis techniques Next the monograph provides a solution for the problem of Control and fault diagnosis for Synchronous Generator based renewable energy systems Control of the marine turbine and synchronous generator unit and Fault diagnosis of the marine turbine and synchronous generator unit Additionally the monograph introduces novel solutions for the problem of Fault diagnosis for

electricity microgrids and gas processing units Fault diagnosis for electric power DC microgrids and Fault diagnosis for electrically actuated gas compressors Furthermore the monograph analyzes and solves the problem of Fault diagnosis for gas and steam turbine power generation units Fault diagnosis for the gas turbine and Synchronous Generator electric power unit and for the steam turbine and synchronous generator power unit Finally the monograph provides a solution for the problem of Fault diagnosis for wind power units and for the distribution grid Fault diagnosis for wind power generators and Fault diagnosis for the electric power distribution grid The new fault detection and isolation methods that the monograph develops are of generic use and are addressed to a wide class of nonlinear dynamical systems with emphasis on electric power systems and electric vehicles On the one side model based fault detection and isolation methods are analyzed In this case known models about the dynamics of the monitored system are used by nonlinear state observers and Kalman Filters which emulate the system's fault free condition On the other side model free fault detection and isolation methods are analyzed In this case raw data are processed by neural networks and nonlinear regressors to generate models that emulate the fault free condition of the monitored system Statistical tests based on the processing of the residuals which are formed between the outputs of the monitored system and the outputs of the fault free model provide objective and almost infallible criteria about the occurrence of failures The new fault detection and isolation methods with statistical procedures for defining fault thresholds enable early fault diagnosis and reveal incipient changes in the parameters of the monitored systems

Nonlinear Control and Filtering for Stochastic Networked Systems Lifeng Ma, Zidong Wang, Yuming Bo, 2018-12-07 In this book control and filtering problems for several classes of stochastic networked systems are discussed In each chapter the stability robustness reliability consensus performance and or disturbance attenuation levels are investigated within a unified theoretical framework The aim is to derive the sufficient conditions such that the resulting systems achieve the prescribed design requirements despite all the network induced phenomena Further novel notions such as randomly occurring sensor failures and consensus in probability are discussed Finally the theories techniques developed are applied to emerging research areas Key Features Unifies existing and emerging concepts concerning stochastic control filtering and distributed control filtering with an emphasis on a variety of network induced complexities Includes concepts like randomly occurring sensor failures and consensus in probability with respect to time varying stochastic multi agent systems Exploits the recursive linear matrix inequality approach completing the square method Hamilton Jacobi inequality approach and parameter dependent matrix inequality approach to handle the emerging mathematical computational challenges Captures recent advances of theories techniques and applications of stochastic control as well as filtering from an engineering oriented perspective Gives simulation examples in each chapter to reflect the engineering practice
