**Distributed Storage Networks** Thomas C. Jepsen, 2003-11-21 The worldwide market for SAN and NAS storage is anticipated to grow from US 2 billion in 1999 to over 25 billion by 2004 As business to business and business to consumer e commerce matures even greater demands for management of stored data will arise With the rapid increase in data storage requirements in the last decade efficient management of stored data becomes a necessity for the enterprise A recent UC Berkeley study predicts that 150 000 terabytes of disk storage will be shipped in 2003 Most financial insurance healthcare and telecommunications institutions are in the process of implementing storage networks that are distributed to some degree For these institutions data integrity is critical and they will spend much time and money on planning One of the primary obstacles to implementing a storage network cited by enterprise IT managers is a lack of knowledge about storage networking technology and the specific issues involved in extending a Storage Area Network SAN or Network Attached Storage NAS over the Metropolitan Area Networks MAN or Wireless Area Networks WAN Distributed Storage Networks Architecture Protocols and Management addresses the terminology gap between enterprise network planners and telecommunications engineers who must understand the transport requirements of storage networks in order to implement distributed storage networks Jepsen comprehensively provides IT managers planners and telecommunications professionals with the information they need in order to choose the technologies best suited for their particular environment Addresses a hot topic that will become increasingly important in the coming years Enables high level managers and planners to make intelligent decisions about network needs Includes example network configurations providing solutions to typical user scenarios Fills the terminology gap between enterprise network managers and telecommunications engineers who must understand the transport requirements of storage networks in order to implement distributed storage area networks A fundamental resource for all network managers planners and network design engineers as well as telecommunications engineers and engineering computer science and information technology students
