Design for the Changing Educational Landscape Andrew Harrison,Les Hutton,2013-10-15 The whole landscape of space use is undergoing a radical transformation In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide the rise of distributed space In the learning environment the social political economic and technological changes responsible for this shift have been further compounded by constantly developing theories of learning and teaching and a wide acceptance of the importance of learning as the core of the community resulting in the blending of all aspects of learning into one seamless experience This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces real and virtual that now accommodate the experience of learning and provide pointers towards the creation and design of learning centred communities Part 1 looks at the entire learning universe as it now stands tracks the way in which its constituent parts came to occupy their role assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform It shows that what is required is innovation within the spaces and integration between them Part 2 finds many examples of innovation in evidence across the world in schools the higher and further education campus and in business and cultural

spaces but an almost total absence of integration Part 3 offers a model that redefines the learning landscape in terms of learning outcomes mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome at the most appropriate scale By encouraging stakeholders to creating an events based rather than space based identity the book hopes to point the way to a fully integrated learning landscape a learning community *Teaching Online* Claire Howell Major,2015-03-15 Demystifies online teaching for both enthusiastic and wary educators and helps faculty who teach online do their best work as digital instructors It is difficult to imagine a college class today that does not include some online component whether a simple posting of a syllabus to course management software the use of social media for communication or a full blown course offering through a MOOC platform In *Teaching Online* Claire Howell Major describes for college faculty the changes that accompany use of such technologies and offers real world strategies for surmounting digital teaching challenges Teaching with these evolving media requires instructors to alter the ways in which they conceive of and do their work according to Major They must frequently update their knowledge of learning teaching and media and they need to develop new forms of instruction revise and reconceptualize classroom materials and refresh their communication patterns Faculty teaching online must also reconsider the student experience and determine what changes for students ultimately mean for their own work and for their institutions *Teaching Online* presents instructors with a thoughtful synthesis of educational theory research and practice as well as a review of strategies for managing the instructional changes involved in teaching online In addition this book presents examples of best practices from successful online instructors as well as cutting edge ideas from leading scholars and educational technologists Faculty members researchers instructional designers students administrators and policy makers who engage with online learning will find this book an invaluable resource
