

## REMOVAL AND INSTALLATION (Continued)

Fig. 40 Brake Pedal Mounting

- 1 - CLUTCH CABLE  
2 - BOOSTER MOUNTING NUTS  
3 - UPPER MOUNTING NUTS

(10) If the vehicle is equipped with antilock brakes, carefully push the power brake booster forward until the booster contacts the ABS ICU mounting bracket.

(11) If the vehicle does not have antilock brakes, carefully push the power brake booster forward one to two inches being careful not to stretch the brake lines from the master cylinder to the brakes.

(12) Remove the two nuts fastening the brake pedal bracket to the instrument panel support (Fig. 40).

(13) Carefully remove the brake pedal assembly by pulling the pedal bracket back toward the instrument panel, releasing the bracket from the booster studs. Next, tip the bracket down past the input rod, guiding the rod through the gap left by the missing brace removed in Step (8). Remove the brake pedal assembly out from under the instrument panel.

(14) The pedal can be removed from its bracket by grinding off the peened end of the shaft, removing the shaft, pedal and bushings. A service parts package is available to replace these items.

## INSTALLATION

(1) If the pedal has been removed from its bracket, install the pedal, bushings and bolt-in-shaft on the bracket using the available service parts package.

(2) Install the brake pedal assembly by tipping the pedal bracket and guiding the power brake booster mounting portion up past the booster input rod. Guide the top of the bracket onto the studs protruding from the instrument panel support (Fig. 40), then guide the booster mounting portion onto the power brake booster mounting studs.

(3) Push the power brake booster back into mounting position from under the hood.

(4) Install the two nuts fastening the brake pedal bracket to the instrument panel support (Fig. 40). Install the nuts all the way, but do not tighten them at this time.

(5) Install the two lower power brake booster mounting nuts, but do not tighten them at this time.

(6) Place the tie bar running between the two upper booster mounting studs onto the studs with the long flat side facing upward and the curved side downward.

(7) Install the two upper power brake booster mounting nuts on their studs.

(8) Tighten all four nuts fastening the brake pedal bracket to the power brake booster to a torque of 34 N·m (300 in. lbs.).

(9) Tighten the two nuts fastening the brake pedal bracket to the instrument panel support to a torque of 34 N·m (300 in. lbs.).

(10) Install the power brake booster input rod on the pin mounted on the side of the brake pedal. Install a new retaining clip on the end of the pin (Fig. 39). Do not reuse the old clip.

**NOTE:** Prior to installing the brake lamp switch, make sure the plunger is at its fully extended position.

(11) Hold the brake lamp switch firmly in one hand. Then using the other hand, pull outward on the plunger of the brake lamp switch until it has ratcheted out to its fully extended position.

(12) Mount the brake lamp switch into the bracket using the following procedure:

- Depress the brake pedal as far down as possible.
- Install the switch in its bracket by aligning the index tab on the switch with the slot in the mounting bracket.
- When the switch is fully seated in its bracket, rotate the switch clockwise approximately 30° to lock the switch into place.

**CAUTION:** Do not use excessive force when pulling back on the brake pedal to adjust the brake lamp switch. If too much force is used, the switch or striker can be damaged.

(13) Gently pull back on the brake pedal until the pedal stops moving. This will ratchet the switch plunger backward to the correct adjustment position.

(14) Install the dash-to-lower coupling seal in place over the lower coupling's plastic collar and dash cover.

(15) Verify the front tires are still in the STRAIGHT-AHEAD position.
