P. Rang, 2006 This title is directed primarily toward health care professionals outside the United States An ideal introduction to the pharmaceutical industry this book describes the process of bringing a new drug to the marketplace It explains why although thousands of compounds show initial promise only a small handful will be developed for human clinical trials and perhaps only one will become an approved drug Describing the huge complexities involved it shows how new molecular understanding and techniques can make the process more targeted and successful Includes the new molecular techniques of drug design and development Discusses current therapeutic needs Covers pharmacoepidemiology and pharmacoeconomics Edited by Humphrey Rang who is also known throughout the world as a co author of the enormously successful and authoritative textbook Pharmacology now in its fifth edition Foreword by Daniel Vasella CEO Novartis International Includes contributors from both the pharmaceutical industry and universities Fundamentals of Bioinformatics ,2003 The British National Bibliography Arthur James Wells, 2004 Ontologies for Bioinformatics Kenneth Baclawski, Tianhua Niu, 2006 Ontologies as a critical framework for the vast amounts of data in the postgenomic era an introduction to the basic concepts and applications of ontologies and ontology languages for the life sciences Recent advances in biotechnology spurred by the Human Genome Project have resulted in the accumulation of vast amounts of new data Ontologies computer readable precise formulations of concepts and the relationship among them in a given field are a critical framework for coping with the exponential growth of valuable biological data generated by high output technologies This book introduces the key concepts and applications of ontologies and ontology languages in bioinformatics and will be an essential guide for bioinformaticists computer scientists and life

science researchers The three parts of Ontologies for Bioinformatics ask and answer three pivotal questions what ontologies are how ontologies are used and what ontologies could be which focuses on how ontologies could be used for reasoning with uncertainty The authors first introduce the notion of an ontology from hierarchically organized ontologies to more general network organizations and survey the best known ontologies in biology and medicine They show how to construct and use ontologies classifying uses into three categories querying viewing and transforming data to serve diverse purposes Contrasting deductive or Boolean logic with inductive reasoning they describe the goal of a synthesis that supports both styles of reasoning They discuss Bayesian networks as a way of expressing uncertainty describe data fusion and propose that the World Wide Web can be extended to support reasoning with uncertainty They call this inductive reasoning web the Bayesian web Encyclopedia of Life Science Katherine E. Cullen, 2009 An illustrated A Z encyclopedia of facts and information on topics relevant to modern science including the cell biological evolution the behavior of organisms and more
