Numerical Solution of Elliptic and Parabolic Partial Differential Equations with CD-ROM John Arthur Trangenstein, 2013-04-18 For mathematicians and engineers interested in applying numerical methods to physical problems this book is ideal Numerical ideas are connected to accompanying software which is also available online By seeing the complete description of the methods in both theory and implementation students will more easily gain the knowledge needed to write their own application programs or develop new theory The book contains careful development of the mathematical tools needed for analysis of the numerical methods including elliptic regularity theory and approximation theory Variational crimes due to quadrature coordinate mappings domain approximation and boundary conditions are analyzed The claims are stated with full statement of the assumptions and conclusions and use subscripted constants which can be traced back to the origination particularly in the electronic version which can be found on the accompanying CD ROM

Function Theoretic Methods in Partial Differential Equations Gilbert, 1969 *Function Theoretic Methods in Partial Differential Equations*

Mass Transport in Solids and Fluids David S. Wilkinson, 2000-11-02 The field of matter transport is central to understanding the processing of materials and their subsequent mechanical properties While thermodynamics determines the final state of a material system it is the kinetics of mass transport that governs how it gets there This book first published in 2000 gives a solid grounding in the principles of matter transport and their application to a range of engineering problems The author develops a unified treatment of mass transport applicable to both solids and liquids Traditionally matter transport in fluids is considered as an extension of heat transfer and can appear to have little relationship to diffusion in solids This unified approach clearly makes the connection between these important fields This book is aimed at advanced undergraduate and beginning graduate students of materials science and engineering and related disciplines It contains numerous worked examples and unsolved problems The material can be covered in a one semester course

Modeling with Differential Equations in Chemical Engineering Stanley M. Walas, 1991 Modelling with Differential Equations in Chemical Engineering covers the modelling of rate processes of engineering in terms of differential equations While it includes the purely mathematical aspects of the solution of differential equations the main emphasis is on

the derivation and solution of major equations of engineering and applied science Methods of solving differential equations by analytical and numerical means are presented in detail with many solved examples and problems for solution by the reader Emphasis is placed on numerical and computer methods of solution A key chapter in the book is devoted to the principles of mathematical modelling These principles are applied to the equations in important engineering areas The major disciplines covered are thermodynamics diffusion and mass transfer heat transfer fluid dynamics chemical reactions and automatic control These topics are of particular value to chemical engineers but also are of interest to mechanical civil and environmental engineers as well as applied scientists The material is also suitable for undergraduate and beginning graduate students as well as for review by practising engineers Notices of the American Mathematical Society American Mathematical Society, 1988
