Functions Of One Complex Variable Graduate Texts In Mathematics Vol 11 V 1:

Complex Analysis Donald E. Marshall, 2019-03-07 This user friendly textbook introduces complex analysis at the beginning graduate or advanced undergraduate level Unlike other textbooks it follows Weierstrass approach stressing the importance of power series expansions instead of starting with the Cauchy integral formula an approach that illuminates many important concepts This view allows readers to quickly obtain and understand many fundamental results of complex analysis such as the maximum principle Liouville's theorem and Schwarz's lemma The book covers all the essential material on complex analysis and includes several elegant proofs that were recently discovered It includes the zipper algorithm for computing conformal maps as well as a constructive proof of the Riemann mapping theorem and culminates in a complete proof of the uniformization theorem Aimed at students with some undergraduate background in real analysis though not Lebesgue integration this classroom tested textbook will teach the skills and intuition necessary to understand this important area of mathematics

Geometric Function Theory Tom Carroll, 2024-12-11 This textbook provides a second course in complex analysis with a focus on geometric aspects It covers topics such as the spherical geometry of the extended complex plane the hyperbolic geometry of the Poincaré disk conformal mappings the Riemann Mapping Theorem and uniformisation of planar domains characterisations of simply connected domains the convergence of Riemann maps in terms of Carathéodory convergence of the image domains normal families and Picard's theorems on value distribution as well as the fundamentals of univalent function theory Throughout the text the synergy between analysis and geometry is emphasised with proofs chosen for their directness The textbook is self contained requiring only a first undergraduate course in complex analysis The minimal topology needed is introduced as necessary While primarily aimed at upper level undergraduates the book also serves as a concise reference for graduates working in complex analysis

Modular Representation Theory and Commutative Banach Algebras David J. Benson, 2024-07-25 [View the abstract](#)

Operator Theory by Example Stephan Ramon Garcia, Javad Mashreghi, William T. Ross, 2023-02-09 Aimed at graduate students this textbook provides an accessible and comprehensive introduction to operator theory Rather than discuss the subject in the abstract this textbook covers the subject through twenty examples of a wide variety of operators discussing the norm spectrum commutant invariant subspaces and interesting properties of each operator The text is supplemented by over 600 end of chapter exercises designed to help the reader master the topics covered in the chapter as well as providing an opportunity to further explore the vast operator theory literature Each chapter also contains well researched historical facts which place each chapter within the broader context of the development of the field as a whole

Analytic Combinatorics in Several Variables Robin Pemantle, Mark C. Wilson, 2013-05-31 Aimed at graduate students and researchers in enumerative combinatorics this book is the first to treat the analytic aspects of combinatorial enumeration from a multivariate perspective

Partial Differential Equations Wolfgang Arendt, Karsten Urban, 2023-01-01 This textbook introduces the study of partial differential equations

using both analytical and numerical methods By intertwining the two complementary approaches the authors create an ideal foundation for further study Motivating examples from the physical sciences engineering and economics complete this integrated approach A showcase of models begins the book demonstrating how PDEs arise in practical problems that involve heat vibration fluid flow and financial markets Several important characterizing properties are used to classify mathematical similarities then elementary methods are used to solve examples of hyperbolic elliptic and parabolic equations From here an accessible introduction to Hilbert spaces and the spectral theorem lay the foundation for advanced methods Sobolev spaces are presented first in dimension one before being extended to arbitrary dimension for the study of elliptic equations An extensive chapter on numerical methods focuses on finite difference and finite element methods Computer aided calculation with MapleTM completes the book Throughout three fundamental examples are studied with different tools Poisson s equation the heat equation and the wave equation on Euclidean domains The Black Scholes equation from mathematical finance is one of several opportunities for extension Partial Differential Equations offers an innovative introduction for students new to the area Analytical and numerical tools combine with modeling to form a versatile toolbox for further study in pure or applied mathematics Illuminating illustrations and engaging exercises accompany the text throughout Courses in real analysis and linear algebra at the upper undergraduate level are assumed *Computer Aided Design of Multivariable Technological Systems* G. G. Leininger, 2014-05-16 *Computer Aided Design of Multivariable Technological Systems* covers the proceedings of the Second International Federation of Automatic Control IFAC The book reviews papers that discuss topics about the use of Computer Aided Design CAD in designing multivariable system such as theoretical issues applications and implementations The book tackles several topics relevant to the use of CAD in designing multivariable systems Topics include quasi classical approach to multivariable feedback system designs fuzzy control for multivariable systems root loci with multiple gain parameters multivariable frequency domain stability criteria and computational algorithms for pole assignment in linear multivariable systems The text will be of great use to professionals whose work involves designing and implementing multivariable systems Mathematical Reviews ,2008 **Subject Guide to Books in Print** ,1991
