Fields Medallists' Lectures Michael Francis Atiyah, Daniel Iagolnitzer, 1997 Although not as publicly well known as the Nobel Prizes the Fields Medal shares the same intellectual standing and is the equivalent award in the field of mathematics This volume presents a selected list of 22 Fields Medallists and their contributions to give a highly interesting and varied bird's eye view of mathematics over the past 60 years The contributions relate directly to the work for which the Medals were awarded or to the medallists' more current interests In most cases they are preceded by the introductory speech given by another leading mathematician during the prize ceremony a photograph and up to date biographical notice *Fields Medallists' Lectures, 2nd Edition* Michael Atiyah, Daniel Iagolnitzer, 2003-11-03 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to one field that of mathematics and an age limit of 40 has become an accepted tradition Mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major contributions in some applied areas can be and have been recognized with Nobel Prizes A list of Fields Medallists and their contributions provides a bird's eye view of mathematics over the past 60 years It highlights the areas in which at various times greatest progress has been made This volume does not pretend to be comprehensive nor is it a historical document On the other hand it presents contributions from Fields Medallists and so provides a highly interesting and varied picture The second edition of *Fields Medallists Lectures* features additional contributions from the following Medallists Kunihiro Kodaira 1954 Richard E Borcherds 1998 William T Gowers 1998 Maxim Kontsevich 1998 Curtis T McMullen 1998 and Vladimir Voevodsky 2002 *Fields Medallists' Lectures*, 2003

Quantum Field Theory I: Basics in Mathematics and Physics Eberhard Zeidler, 2007-04-18 This is the first volume of a modern introduction to quantum field theory which addresses both mathematicians and physicists at levels ranging from advanced undergraduate students to professional scientists The book bridges the acknowledged gap between the different languages used by mathematicians and physicists For students of mathematics the author shows that detailed knowledge of the physical background helps to motivate the mathematical subjects and to discover interesting interrelationships between quite different mathematical topics For students of physics fairly advanced mathematics is presented which goes beyond the usual curriculum in physics *Meeting under the Integral Sign?: The Oslo Congress of Mathematicians on the Eve of the Second World War* Christopher D. Hollings, Reinhard Siegmund-Schultze, 2020-04-08 This book examines the historically unique conditions under which the International Congress of Mathematicians took place in Oslo in 1936 This Congress was the only one on this level to be held during the period of the Nazi regime in Germany 1933-1945 and after the wave of emigrations from it Relying heavily on unpublished archival sources the authors consider the different goals of the various participants in the Congress most notably those of the Norwegian organizers and the Nazi led German delegation They also investigate the reasons for the absence of the proposed Soviet and Italian delegations In addition aiming to shed light onto

the mathematical dimension of the Congress the authors provide overviews of the nineteen plenary presentations as well as their planning and development Biographical information about each of the plenary speakers rounds off the picture The Oslo Congress the first at which Fields Medals were awarded is used as a lens through which the reader of this book can view the state of the art of mathematics in the mid 1930s **Lecture Notes on Chern-Simons-Witten Theory** Sen Hu,E.

Witten,2001 This monograph is based on lectures on topological quantum field theory given in 1989 at Princeton University by E Witten in which he unified several important mathematical works in terms of the Donaldson polynomial Gromov Floer homology and Jones polynomials Witten explained his three dimensional construction of Jones polynomials an elegant construction of a new polynomial invariant in three dimensional space per the author via quantization of Chern Simons gauge theory Hu Princeton U adds missing details and some new developments in the field Annotation copyrighted by Book News Inc Portland OR **Quantum Field Theory II: Quantum Electrodynamics** Eberhard Zeidler,2008-09-03 And God said Let

there be light and there was light Genesis 1:3 Light is not only the basis of our biological existence but also an essential source of our knowledge about the physical laws of nature ranging from the seventeenth century geometrical optics up to the twentieth century theory of general relativity and quantum electrodynamics Folklore Don't give us numbers give us insight A contemporary natural scientist to a mathematician The present book is the second volume of a comprehensive introduction to the mathematical and physical aspects of modern quantum field theory which comprehends the following six volumes Volume I Basics in Mathematics and Physics Volume II Quantum Electrodynamics Volume III Gauge Theory Volume IV Quantum Mathematics Volume V The Physics of the Standard Model Volume VI Quantum Gravitation and String Theory It is our goal to build a bridge between mathematicians and physicists based on the challenging question about the fundamental forces in macrocosmos the universe and microcosmos the world of elementary particles The six volumes address a broad audience of readers including both undergraduate and graduate students as well as experienced scientists who want to become familiar with quantum field theory which is a fascinating topic in modern mathematics and physics **Quantum Field Theory III:**

Gauge Theory Eberhard Zeidler,2011-08-17 In this third volume of his modern introduction to quantum field theory Eberhard Zeidler examines the mathematical and physical aspects of gauge theory as a principle tool for describing the four fundamental forces which act in the universe gravitative electromagnetic weak interaction and strong interaction Volume III concentrates on the classical aspects of gauge theory describing the four fundamental forces by the curvature of appropriate fiber bundles This must be supplemented by the crucial but elusive quantization procedure The book is arranged in four sections devoted to realizing the universal principle force equals curvature Part I The Euclidean Manifold as a Paradigm Part II Ariadne's Thread in Gauge Theory Part III Einstein's Theory of Special Relativity Part IV Ariadne's Thread in Cohomology For students of mathematics the book is designed to demonstrate that detailed knowledge of the physical background helps to reveal interesting interrelationships among diverse mathematical topics Physics students will be exposed to a fairly

advanced mathematics beyond the level covered in the typical physics curriculum Quantum Field Theory builds a bridge between mathematicians and physicists based on challenging questions about the fundamental forces in the universe macrocosmos and in the world of elementary particles microcosmos **Mathematical Research Today and Tomorrow** Carles Casacuberta, Manuel Castellet, 2006-11-15 The Symposium on the Current State and Prospects of Mathematics was held in Barcelona from June 13 to June 18 1991 Seven invited Fields medalists gave talks on the development of their respective research fields The contents of all lectures were collected in the volume together with a transcription of a round table discussion held during the Symposium All papers are expository Some parts include precise technical statements of recent results but the greater part consists of narrative text addressed to a very broad mathematical public CONTENTS R Thom Leaving Mathematics for Philosophy S Novikov Role of Integrable Models in the Development of Mathematics S T Yau The Current State and Prospects of Geometry and Nonlinear Differential Equations A Connes Noncommutative Geometry S Smale Theory of Computation V Jones Knots in Mathematics and Physics G Faltings Recent Progress in Diophantine Geometry **The Abel Prize** Helge Holden, Ragni Piene, 2009-12-01 The book presents the winners of the first five Abel Prizes in mathematics 2003 Jean Pierre Serre 2004 Sir Michael Atiyah and Isadore Singer 2005 Peter D Lax 2006 Lennart Carleson and 2007 S R Srinivasa Varadhan Each laureate provides an autobiography or an interview a curriculum vitae and a complete bibliography This is complemented by a scholarly description of their work written by leading experts in the field and by a brief history of the Abel Prize Interviews with the laureates can be found at <http://extras.springer.com>
