Fundamentals of Electric Circuits, by Charles Alexander and Matthew Sadiku, 3rd Edition, McGraw-Hill

Errata, by Chris Black, chris@lithoguru.com

While teaching out of this book at the University of Texas at Austin, Fall 2008, I discovered the following errors:

p. 185, Figure 5.19 – the caption reads “For Example 5.9”, but it should say “For Example 5.5”.

p. 254, second paragraph of section 7.2, first sentence begins “Consider a series combination ... shown in Fig. 7.1”. This circuit of two components could just as easily be considered a parallel combination, thus I think the word “series” should be deleted.

p. 267, definition (blue box) of the unit impulse function is incorrect. The definition given is for an impulse function. For a unit impulse function, the definition should include the constraint that the function has unit area. (Also, I think it would be valuable to mention that this function sometimes goes by the name “Dirac delta function”.)

p. 322, Figure 8.9. It’s a bit confusing that parts (a) and (b) are for the case where $I_s = 0$, but (c) has a non-zero initial current. I suggest that at the very least, the caption should specify that (a) and (b) are examples for the case where $I_s = 0$.

p. 327, equation (8.34). In this equation, the roles of A_1 and A_2 are reversed compared to the very similar equation (8.21). While not technically an error, it is confusing to the average student.

p. 332, second paragraph. The term $v_{ss}(t)$ is referred to in the sentence and in equation (8.41). However, by definition, v_{ss} is not dependent on time (it is the steady state response). Thus, it should not have the (t) argument.

p. 354, equation (8.16.9). The final equal sign should be an “approximately equal” sign, and the sentence before or after this equation should mention that only the largest terms in the full equation for the voltage has been kept.

p. 406, Figure 9.46, the bottom line/connection of the circuit is missing.

p. 432, Practice problem 10.11 – the answer given is wrong. The correct answer (for the voltage piece) is $2.108\cos(5000t-18.44^\circ)$.
