Fundamentals of Materials Modelling for Metals Processing Technologies Jianguo Lin, 2015 **Fundamentals Of Materials Modelling For Metals Processing Technologies: Theories And Applications** Jianguo Lin, 2015-03-24 This book provides a comprehensive introduction to the unique theory developed over years of research on materials and process modelling and its application in metal forming technologies It starts with the introduction of fundamental theories on the mechanics of materials computational mechanics and the formulation of unified constitutive equations Particular attention is paid to elastic plastic formulations for cold metal forming and unified elastic viscoplastic constitutive equations for warm hot metals processing Damage in metal forming and numerical techniques to solve and determine the unified constitutive equations are also detailed Examples are given for the application of the unified theories to solve practical problems encountered in metal forming processes This is particularly useful to predict microstructure evolution in warm hot metal forming processes Crystal plasticity theories and modelling techniques with their applications in micro forming are also introduced in the book The book is self contained and unified in presentation The explanations are highlighted to capture the interest of curious readers and complete enough to provide the necessary background material to further explore develop new theories and applications **Mechanics of Materials in Modern Manufacturing Methods and Processing Techniques** Vadim Silberschmidt, 2020-04-03 *Mechanics of Materials in Modern Manufacturing Methods and Processing Techniques* provides a detailed overview of the latest developments in the mechanics of modern metal forming manufacturing Focused on mechanics as opposed to process it looks at the mechanical behavior of materials exposed to loading and environmental conditions related to modern manufacturing processes covering deformation as well as damage and fracture processes The book progresses from forming to machining and surface treatment processes and concludes with a series of chapters looking at recent and emerging technologies Other topics covered include simulations in autofrettage processes modeling strategies related to cutting simulations residual stress caused by high thermomechanical gradients and pultrusion as well as the mechanics of the curing process forging and cold spraying among others Some non metallic materials such as ceramics and composites are covered as well Synthesizes the latest research in the mechanics of modern metal forming processes Suggests theoretical models and numerical codes to predict mechanical responses Covers mechanics of shot peening pultrusion hydroforming magnetic pulse forming Considers applicability of different materials and processes for optimum performance Deformation-Based Processing of Materials Heng Li, Mingwang Fu, 2019-03-11 *Deformation Based Processing of Materials Behavior Performance Modeling and Control* focuses on deformation based process behaviors and process performance in terms of the quality of the needed shape geometries and the requested properties of the deformed products In addition modelling and simulation is covered to create an in depth and epistemological understanding of the process Other topics discussed include ways to efficiently reduce or avoid defects and

effectively improve the quality of deformed parts The book is ideal as a technical document but also serves as scientific literature for engineers scientists academics research students and management professionals involved in deformation based materials processing **Crystal Indentation Hardness** Ronald W. Armstrong, Stephen M. Walley, Wayne L.

Elban, 2018-07-05 This book is a printed edition of the Special Issue Crystal Indentation Hardness that was published in Crystals Superplasticity in Advanced Materials José María Cabrera Marrero, 2023-09-01 The book presents practical and

theoretical works on superplasticity in metals and ceramics on deformation mechanisms on processes to obtain large ultrafine grained structures on advanced characterization techniques and on hot deformation of advanced materials Key papers focus on 1 processing of metallic alloys for achieving exceptional superplastic properties 2 high pressure sliding HPS processes 3 in situ neutron and synchrotron methods and 4 ultra severe plastic deformation Keywords Superplasticity Superfunctionality High pressure Sliding High pressure Torsion Precise Forming Numerical Simulation Aeronautical Parts Near unconstrained Superplastic Parts Low temperature Superplasticity Friction Stir Processing Microstructure Evolution Corrosion Properties Duplex Stainless Steel Grain Boundary Sliding Laminated Materials Asymmetric Hot Rolling Uniaxial Hot Pressing Diffusion Bonding
