Fundamentals of Tree Ring Research James H. Speer, 2021-11-30 Tree ring dating dendrochronology is a method of scientific dating based on the analysis of tree ring growth patterns As author James Speer notes trees are remarkable bioindicators Although there are other scientific means of dating climatic and environmental events dendrochronology provides the most reliable of all paleorecords Dendrochronology can be applied to very old trees to provide long term records of past temperature rainfall fire insect outbreaks landslides hurricanes and ice storms to name only a few events This comprehensive text addresses all of the subjects that a reader who is new to the field will need to know and will be a welcome reference for practitioners at all levels It includes a history of the discipline biological and ecological background principles of the field basic scientific information on the structure and growth of trees the complete range of dendrochronology methods and a full description of each of the relevant subdisciplines Individual chapters address the composition of wood methods of field and laboratory study dendroarchaeology dendroclimatology dendroecology dendrogeomorphology and dendrochemistry The book also provides thorough introductions to common computer programs and methods of statistical analysis In the final chapter the author describes frontiers in dendrochronology with an eye toward future directions in the field He concludes with several useful appendixes including a listing of tree and shrub species that have been used successfully by dendrochronologists Throughout photographs and illustrations visually represent the state of knowledge in the field

Dating Buildings and Landscapes with Tree-Ring Analysis Darrin L. Rubino, Christopher Baas, 2019-05-13 This book presents guidance theory methodologies and case studies for analyzing tree rings to accurately date and interpret historic buildings and landscapes Written by two long time practitioners in the field of dendrochronology the research is grounded in the fieldwork data of approximately 200 structures and landscapes By scientifically analyzing the tree rings of historic timbers preservationists can obtain valuable information about construction dates interpret the evolution of landscapes and buildings over time identify species and provenance and gain insight into the species matrix of local forests Authors Darrin L Rubino and Christopher Baas demonstrate through full color illustrated case studies and methodologies how this information can be used to interpret the history of buildings and landscapes and assist preservation decision making Over 1 000 samples obtained from more than 40 buildings including high style houses vernacular log houses and timber frame barns are reported This book will be particularly relevant for students instructors and professional readers interested in historic preservation cultural landscapes museum studies archaeology and dendrochronology globally

Stable Isotopes in Tree Rings Rolf T. W. Siegwolf, J. Renée Brooks, John Roden, Matthias Saurer, 2022-06-06 This Open Access volume highlights how tree ring stable isotopes have been used to address a range of environmental issues from paleoclimatology to forest management and anthropogenic impacts on forest growth It will further evaluate weaknesses and strengths of isotope applications in tree rings In contrast to older tree ring studies which predominantly applied a pure statistical approach this book will focus on physiological mechanisms that influence isotopic signals and reflect environmental impacts Focusing on connections between physiological responses and drivers of isotope variation will also clarify why environmental impacts are not linearly reflected in isotope ratios and tree ring widths This volume will be of interest to any researcher and educator who uses tree rings and other organic matter proxies to reconstruct paleoclimate as well as to understand contemporary functional processes and anthropogenic influences on native ecosystems The use of stable isotopes in biogeochemical studies has expanded greatly in recent years making this volume a valuable resource to a growing and vibrant community of researchers

Measurements, Indicators, and Research Methods for Sustainability Ian Spellerberg, Daniel S. Fogel, Sarah E. Fredericks, Lisa M. Butler Harrington, Maria Proto, Patricia Wouters, 2012-04-09

Measurements Indicators and Research Methods for Sustainability presents a thorough and accessible overview of the ways in which sustainability is charted worldwide Some articles introduce basic concepts such as quantitative versus qualitative data or the weak versus strong sustainability debate others examine how indicators in specific areas climate change and soil conservation agriculture and mining have been applied or not to different regions Research analysts explain the modes and media through which these measurements are broadcast stressing the importance of developing methods that can be understood by both experts and ordinary citizens They also examine the process of monitoring itself a controversial topic affecting national or international policy law rules and regulations

Source-to-Sink Fluxes in Undisturbed Cold Environments Achim A. Beylich, John C. Dixon, Zbigniew Zwoliński, 2016-07-07
Amplified climate change and ecological sensitivity of polar and cold climate environments are key global environment issues. Understanding how projected climate change will alter surface environments in these regions is only possible when present day source to sink fluxes can be quantified. The book provides the first global synthesis and integrated analysis of environmental drivers and quantitative rates of solute and sedimentary fluxes in cold environments and the likely impact of projected climate change. The focus on largely undisturbed cold environments allows ongoing climate change effects to be detected and moreover distinguished from anthropogenic impacts. A novel approach for co-ordinated and integrative process geomorphic research is introduced to enable better comparison between studies. This highly topical and multidisciplinary book which includes case studies covering Arctic, Antarctic and alpine environments will be of interest to graduate students and researchers in the fields of geomorphology, sedimentology and global environmental change.

Application of Dendroclimatological Methods for Forest Growth Modelling Maris Hordo, 2011 Canadian Journal of Forest Research, 2015-04

An Introduction to Tree-Ring Dating Marvin A. Stokes, Terah L. Smiley, 2022-05-03
Tree ring dating or dendrochronology is the study of the chronological sequence of annual growth rings in trees. This book, a seminal study in its field, provides a simple yet eloquent introduction to the discipline, explaining what a dendrochronologist does both in the field and in the laboratory. Authors Stokes and Smiley first explain the basic principles of tree ring dating, then describe details of the process step by step from the time a sample is collected until it is incorporated into a master chronology. The book focuses on coniferous evergreens of the Southwest, particularly piñons, because they have wide geographic distribution, constitute a large population, and show excellent growth response to certain controlling factors. The book is specifically concerned with the task of establishing a calendar date for a wood or charcoal specimen. This concise but thorough explication of an important discipline will make dendrochronology more meaningful to students and professionals in archaeology, forestry, hydrology and global change.

Forest Science, 2017 **Tree Rings** Fritz Hans Schweingruber, 2012-12-06
At a meeting of dendrochronologists, an American colleague described the effects of volcanic eruptions on annual ring formation in bristlecone pines. I knew very little about either volcanoes or American pines. At the same meeting, European scientists spoke on the dendrochronological dating of lakeshore settlements and the effects of larch bud moth attack on trees in the Alps. It is possible that American participants were not in a position to fully appreciate these papers either. In other words, dendrochronology is an extremely interdisciplinary science; its facets range from modern statistics on wood anatomy to the history of art. It is difficult even for dendrochronologists to keep in touch with the whole spectrum, and even more difficult for the layman to obtain an overall view of the many methods and fields of application. In

recent times specialisation has begun to hinder communication between the various sectors Archaeologists for instance set up their own dendrochronological laboratories and construct independent chronologies to serve their particular interests The scientific institutions which previously carried out such work are now turning more and more to strongly statistically or biologically oriented questions The full wealth of information contained in tree rings however will be revealed only when dendrochronologists make a concerted effort to relate the findings of the different fields In spite of inevitable specialisation it is necessary that the expert concern himself with the work of his colleagues
