Future Oriented Technology Analysis:

Future-Oriented Technology Analysis Cristiano Cagnin, Michael Keenan, Ron Johnston, Fabiana Scapolo, Rémi Barré, 2008-07-29 The application of foresight to address the challenges of uncertainty and rapid change has grown dramatically in the past decade. In that period the techniques have been greatly refined and the scope has been broadened to encompass future oriented technology analysis (FTA) and more recently the concept and practice of strategic intelligence (FTAI). FTA addresses directly the longer term future through the active and continuous development of visions and pathways to realise these visions. It is increasingly seen as a valuable management and policy tool complementing and extending further into the future classical strategy planning and decision making approaches. This book charts the development of FTA and provides the first coherent description and analysis of its practical application and impact in the worlds of business, government, education and research in both advanced and developing countries. It draws on papers addressing the application of FTA around the globe which were presented at the Second International Seville Seminar in September 2006. The insights and practical experience will be invaluable for company managers, government ministers and officials, researchers and academics with responsibilities for effective planning and decision making in an increasingly turbulent and unpredictable world.

Future-Oriented Technology Analysis Cristiano Cagnin, 2015 This paper reflects on the potential of future oriented analysis (FTA) to address major change and to support decision makers and other stakeholders in anticipating and dealing with transformations. It does so by critically reflecting on the selected papers for this special issue as well as on the discussions that took place at the fourth Seville International Conference on Future oriented Technology Analysis. Considering the potential roles of FTA in enabling a better understanding of complex situations and in defining effective policy responses leads to the understanding that appropriate FTA practices are needed to enable FTA to fulfil such roles. Dealing with disruptive changes and grand challenges in particular therefore raises several conceptual, methodological and operational issues. Two of them are general while further two are specific to the so called grand challenges: i) distinguish known unknowns, unknown knowns and unknown unknowns; ii) combine quantitative and qualitative approaches in a relevant and feasible way; iii) understand the complex and systemic nature of grand challenges; and iv) orchestrate joint responses to grand challenges. After a brief explanation of these issues, the paper outlines the main ideas of the papers published in this special issue. These present various methodological aspects of FTA approaches as well as some advances needed in practice to assist FTA practitioners and stakeholders in comprehending transformations and in tackling the so called grand challenges.
