process technology this book weaves together these threads as they interact in manufacturing It has five parts Getting to Know Manufacturing Fundamental concepts of manufacturing as an economic activity from manufacturing strategy to forecasting market demand Engineering the Factory Physical design of factories and processes the necessary infrastructure and technology for manufacturing Making Information Flow The central nervous system that triggers and responds to events occurring in production Making Materials Flow The logistics of manufacturing from materials handling inside the factory via warehousing to supply chain management Enhancing Performance Managing manufacturing performance and methods to maintain and improve it both in times of normal operations and emergencies Supported with rich illustrations and teaching aids Introduction to Manufacturing is essential reading for industrial engineering and management students of all ages and backgrounds engaged in the vital task of making the things we all use

Identifying Product and Process State Drivers in Manufacturing Systems Using Supervised Machine Learning Thorsten Wuest, 2015-04-20 The book reports on a novel approach for holistically identifying the relevant state drivers of complex multi stage manufacturing systems This approach is able to utilize complex diverse and high dimensional data sets which often occur in manufacturing applications and to integrate the important process intra and interrelations The approach has been evaluated using three scenarios from different manufacturing domains aviation chemical and semiconductor The results which are reported in detail in this book confirmed that it is possible to incorporate implicit process intra and interrelations on both a process and programme level by applying SVM based feature ranking In practice this method can be used to identify the most important process parameters and state characteristics the so called state drivers of a manufacturing system Given the increasing availability of data and information this selection support can be directly utilized in e g quality monitoring and advanced process control Importantly the method is neither limited to specific products manufacturing processes or systems nor by specific quality concepts
