**Statistical Engineering** Stefan H. Steiner, R. Jock MacKay, 2005-01-02 Reducing the variation in process outputs is a key part of process improvement For mass produced components and assemblies reducing variation can simultaneously reduce overall cost improve function and increase customer satisfaction with the product The authors have structured this book around an algorithm for reducing process variation that they call Statistical Engineering The algorithm is designed to solve chronic problems on existing high to medium volume manufacturing and assembly processes The fundamental basis for the algorithm is the belief that we will discover cost effective changes to the process that will reduce variation if we increase our knowledge of how and why a process behaves as it does A key way to increase process knowledge is to learn empirically that is to learn by observation and experimentation The authors discuss in detail a framework for planning and analyzing empirical investigations known by its acronym QPDAC Question Plan Data Analysis Conclusion They classify all effective ways to reduce variation into seven approaches A unique aspect of the algorithm forces early consideration of the feasibility of each of the approaches Also includes case studies chapter exercises chapter supplements and six appendices PRAISE FOR Statistical Engineering I found this book uniquely refreshing Don't let the title fool you The methods described in this book are statistically sound but require very little statistics If you have ever wanted to solve a problem with statistical certainty without being a statistician then this book is for you A reader in Dayton OH This is the most comprehensive treatment of variation reduction methods and insights I've ever seen Gary M Hazard Tellabs Throughout the text emphasis has been placed on teamwork fixing the obvious before jumping to advanced studies and cost of implementation All this makes the manuscript attractive for real life application of complex techniques Guru Chadhabr Comcast IP Services COMMENTS FROM OTHER CUSTOMERS Average Customer Rating 5 of 5 based on 1 review This is NOT a typical book on statistical tools It is a strategy book on how to search for cost effective changes to reduce variation using empirical means i.e. observation and experiment The uniqueness of this book Summarizes the seven ways to reduce variation so we know the goal of the data gathering and analysis present analysis results using graphs instead of P value and integrates Taguchi Shainin methods and classical statistical approach It is a must read for those who are in the business of reducing variation using data in particular

Improving the quality of products and manufacturing processes at low cost is an economic and technological challenge to industrial engineers and managers alike In today's business world the implementation of experimental design techniques often falls short of the mark due to a lack of statistical knowledge on the part of engineers and managers in their analyses of manufacturing process quality problems This timely book aims to fill this gap in the statistical knowledge required by engineers to solve manufacturing quality problems by using Taguchi experimental design methodology The book increases awareness of strategic methodology through real life case studies providing valuable information for both academics and professionals with no prior knowledge of the theory of probability and statistics Experimental Quality Provides a unique framework to help engineers and managers address quality problems and use strategic design methodology Offers detailed case studies illustrating the implementation of experimental design theory Is easily accessible without prior knowledge or understanding of probability and statistics This book provides an excellent resource for both academic and industrial environments and will prove invaluable to practising industrial engineers quality engineers and engineering managers from all disciplines      *Learning Directory*, 1970      **The Journal of Industrial Engineering**, 1965 Vol 9 no 5 is Proceedings of the 9th conference 1958 of the Institute      *Engineering Education*, 1984      Managing Product Families Susan Walsh Sanderson, Mustafa Uzumeri, 1997 The Innovation Imperative Strategies for Managing Product Models and Families by Susan Sanderson and Mustafa Uzumeri traces the new competitive challenges to the patterns appearing in product variety and change The authors successfully illustrate these patterns through a series of case studies that help to classify and explain the growing competitive challenge of dynamic competition Manufacturers are being forced to respond to new and different competitive challenges The Innovation Imperative will make you aware of the patterns in global competition and inspire you to create new strategies and management styles      Current Index to Statistics, Applications, Methods and Theory, 1999 The Current Index to Statistics CIS is a bibliographic index of publications in statistics probability and related fields
