Bibliographic Index , 2010 **Sustainable Buildings and Infrastructure** Annie R. Pearce, Yong Han Ahn, Hanmi Global Co, Ltd, 2013-07-03 Construction is one of the biggest industries in the world providing necessary facilities for human prosperity ranging from the homes in which we live to the highways we drive the power plants that provide energy for our daily activities and the very infrastructure on which human society is built The construction sector including the building sector has among the largest potential of any industry to contribute to the reduction of greenhouse gas emissions This ambitious and comprehensive textbook covers the concept of embedding sustainability across all construction activities It is aimed at students taking courses in construction management and the built environment Written in a lively and engaging style the book sets out the practical requirements of making the transition to a sustainable construction industry by 2020

Case studies are included throughout making the book both a core reference and a practical guide **Proceedings of the ... National Passive Solar Conference**, 1998 *Physics-Aware Machine Learning for Integrated Energy Systems Management* Mohammadreza Daneshvar, Behnam Mohammadi-Ivatloo, Kazem Zare, Jamshid Aghaei, 2025-08-21 Physics Aware Machine Learning for Integrated Energy Systems Management a new release in the Advances in Intelligent Energy Systems series guides the reader through this state of the art approach to computational methods from data input and training to application opportunities in integrated energy systems The book begins by establishing the principles design and needs of integrated energy systems in the modern sustainable grid before moving into assessing aspects such as sustainability energy storage and physical economic models Detailed step by step procedures for utilizing a variety of physics aware machine learning models are provided including reinforcement learning feature learning and neural networks Supporting students researchers and industry engineers to make renewable integrated grids a reality this book is a holistic introduction to an exciting new approach in energy systems management Outlines the challenges opportunities and applications for utilizing physics aware machine learning to support renewable energy integration to the modern grid Covers a wide variety of techniques from fundamental principles to security concerns Represents the latest offering in the cutting edge series Advances in Intelligent Energy Systems which introduces these essential multidisciplinary skills to modern energy engineers **Sustainable Building Design Framework** Joseph R. Piacenza, 2012 This paper combines two research publications working toward the development of an integrated framework for commercial sustainable building design Current methodologies utilize a traditional architectural top down approach to sustainable building design practices that consumes financial and temporal resources early in the design process By identifying the array mechanical subsystems required to meet modern building standards such as net zero energy and water and recognizing the importance of these interactions designers can mitigate this resource consumption The first paper presents an anthropological case study of the schematic design process of the Oregon Sustainability Center a net zero building slated for construction in Portland Oregon This research outlines the complexity of mechanical subsystems required to achieve net zero standards and how project stakeholders affect the design process The second paper further explores this concept by analyzing building subsystems in the context of a traditional complex system airplane automobile etc and uses optimization techniques to understand significant system interactions A computer model is created that optimizes lighting availability for a commercial workspace incorporating cost building standards and user environment By considering post construction building usage each subsystem can be designed for maximum user productivity reducing costs associated with sustainable design practices Sustainable Construction Charles J. Kibert, 2008 Sustainable Construction uses the latest US Green Building Council's Leadership in Energy and Environmental Design standard to explain the best practices in building procurement and delivery systems *Sustainable Building Design* Miles Keeping, David Shiers, 2017-12-18 An inside view of how one of the world's leading

architecture and engineering practice does business Sustainable Built Environments Principles and Practice offers detailed environmentally sound design solutions to a wide range of building engineering challenges The text uses case examples and project data provided by engineers and designers at Arup Associates It covers a broad range of relevant issues with focused commentaries and explanations presented in an accessible format for use by students busy practitioners and informed clients Whilst this book stresses the importance of a unified approach to design the text is divided into six principal chapters each addressing an important aspect of sustainable architecture and engineering These chapters Master Planning Transport Energy The Building Envelope Environmental Services and Materials may be read on their own or in sequence as part of a narrative Throughout the book photographs architectural and engineering drawings and diagrams examples and other data illustrate the case studies Numerous web links are provided to additional information This inspirational book Focuses on the work of Arup Associates the award winning architectural and engineering practice Uses real life examples of functioning buildings and structures to provide information and guidance on the development of sustainable solutions Is packed with informative illustrations Sustainable Built Environments Principles and Practice is a unique text that will inform and inspire architects and engineers as well as students of those disciplines around the globe
