Dynamics And Robust Control Of Robot-environment Interaction Miomir Vukobratovic, Dragoljub Surdilovic, Yury Ekalo, Dusko Katic, 2009-03-06 This book covers the most attractive problem in robot control dealing with the direct interaction between a robot and a dynamic environment including the human robot physical interaction It provides comprehensive theoretical and experimental coverage of interaction control problems starting from the mathematical modeling of robots interacting with complex dynamic environments and proceeding to various concepts for interaction control design and implementation algorithms at different control layers Focusing on the learning principle it also shows the application of new and advanced learning algorithms for robotic contact tasks The ultimate aim is to strike a good balance between the necessary theoretical framework and practical aspects of interactive robots *Advanced Dynamics Modeling, Duality and Control of Robotic Systems* Edward Y.L. Gu, 2021-09-23 This book provides detailed fundamental theoretical reviews and preparations necessary for developing advanced dynamics modeling and control strategies for various types of robotic systems This research book specifically addresses and discusses the uniqueness issue of representing orientation or rotation and further proposes an innovative isometric embedding approach The novel approach can not only reduce the dynamic formulation for robotic systems into a compact form but it also offers a new way to realize the orientational trajectory tracking control procedures In addition the book gives a comprehensive introduction to fundamentals of mathematics and physics that are required for modeling robot dynamics and developing effective control algorithms Many computer simulations and realistic 3D animations to verify the new theories and algorithms are included in the book as well It also presents and discusses the principle of duality involved in robot kinematics statics and dynamics The duality principle can guide the dynamics modeling and analysis into a right direction for a variety of robotic systems in different types from open serial chain to closed parallel chain mechanisms It intends to serve as a diversified research reference to a wide range of audience including undergraduate juniors and seniors graduate students researchers and engineers interested in the areas of robotics control and applications **Soft Robotics** Alexander Verl, Alin Albu-Schäffer, Oliver Brock, Annika Raatz, 2015-03-13 The research areas as well as the knowledge gained for the practical use of robots are growing and expanding beyond manufacturing and industrial automation making inroads in sectors such as health care and terrain sensing as well as general assistive systems working in close interaction with humans In a situation like this it is necessary for future robot systems to become less stiff and more specialized by taking inspiration from the mechanical compliance and versatility found in natural materials and organisms At present a new discipline is emerging in this area called Soft Robotics It particularly challenges the traditional thinking of engineers as the confluence of technologies ranging from new materials sensors actuators and production techniques to new design tools will make it possible to create new systems whose structures are almost completely made of soft materials which bring about entirely new functions and behaviors similar in

many ways to natural systems These Proceedings focus on four main topics Soft Actuators and Control Soft Interactions Soft Robot Assistants Potential and Challenges Human centered Soft Robotics Cable-Driven Parallel Robots Andreas Pott,Tobias Bruckmann,2014-08-14 This volume presents the outcome of the second forum to cable driven parallel robots bringing the cable robot community together It shows the new ideas of the active researchers developing cable driven robots The book presents the state of the art including both summarizing contributions as well as latest research and future options The book cover all topics which are essential for cable driven robots Classification Kinematics Workspace and Singularity Analysis Statics and Dynamics Cable Modeling Control and Calibration Design Methodology Hardware Development Experimental Evaluation Prototypes Application Reports and new Application concepts **Journal of Dynamic Systems, Measurement, and Control** ,1996 *Proceedings of the ASME Dynamic Systems and Control Division* ,1998 *International Conference on Bond Graph Modeling, January 17-20, 1993, Hyatt Regency La Jolla, La Jolla, California* José Joaquin Granda,François E.
