Dynamics Of Complex Interconnected Biological Systems Mathematical Modeling:

Dynamics of Complex Interconnected Biological Systems Jennings, Mees, Vincent, 2012-12-06 This volume contains the proceedings of the U S Australia workshop on Complex Interconnected Biological Systems held in Albany Western Australia January 1 5 1989 The workshop was jointly sponsored by the Department of Industry Trade and Commerce Australia and the National Science Foundation USA under the US Australia agreement Biological systems are typically hard to study mathematically This is particularly so in the case of systems with strong interconnections such as ecosystems or networks of neurons In the past few years there have been substantial improvements in the mathematical tools available for studying complexity Theoretical advances include substantially improved understanding of the features of nonlinear systems that lead to important behaviour patterns such as chaos Practical advances include improved modelling techniques and deeper understanding of complexity indicators such as fractal dimension Game theory is now playing an increasingly important role in understanding and describing evolutionary processes in interconnected systems The strategies of individuals which affect each other's fitness may be incorporated into models as parameters Strategies which have the property of evolutionary stability result from particular parameter values which may be the main feature of living determined using game theoretic methods Since systems evolve it seems appropriate that any model used to describe such systems should have this feature as well Evolutionary game theory should lead the way in the development of such methods

Complexity in Big History David J. LePoire, Leonid Grinin, Andrey Korotayev, 2025-05-08 This book explores periodization in Big History against the background of complexity growth across the Universe on our planet and in biological social and cultural systems It traces the accelerating rise in complexity throughout history and the major historical transformations involved in the evolution of life humans and civilization It draws on concepts from physics and evolutionary biology to offer

potential models of the underlying mechanisms driving this acceleration along with potential clues to how it might end In the editors introduction Chapter 1 the effort to periodize is placed within the historical context along with considerations from complexity science Subsequent chapters explore various aspects of periodization and complexity by a identifying symmetrical cosmic and biosocial trends b testing rigor and criteria for evaluating periodization c attempting to integrate different approaches through multiple perspectives d proposing different strategies for determining geometric patterns in terrestrial bio social evolution and e applying the traditional threshold model to gain insights into possible future pathways A concluding chapter identifies commonalities research gaps and possible approaches to integration as the current state of the world system rapidly evolves while also offering a deeper understanding of complexity dynamics and historical processes Each chapter includes an extensive bibliography allowing a deeper and more detailed examination of the issues covered

Control and Chaos Alistair Mees, Thomas L. Vincent, Kok L. Teo, Kevin Judd, 2012-12-06 This volume contains the proceedings of the US Australia workshop on Control and Chaos held in Honolulu Hawaii from 29 June to 1 July 1995 The workshop was jointly sponsored by the National Science Foundation USA and the Department of Industry Science and Technology Australia under the US Australia agreement Control and Chaos it brings back memories of the endless reruns of Get Smart where the good guys worked for Control and the bad guys were associated with Chaos In keeping with current events Control and Chaos are no longer adversaries but are now working together In fact bringing together workers in the two areas was the focus of the workshop The objective of the workshop was to bring together experts in dynamical systems theory and control theory and applications workers in both fields to focus on the problem of controlling nonlinear and potentially chaotic systems using limited control effort This involves finding and using orbits in nonlinear systems which can take a system from one region of state space to other regions where we wish to stabilize the system Control is used to generate useful chaotic trajectories where they do not exist and to identify and take advantage of useful ones where they do exist A controller must be able to nudge a system into a proper chaotic orbit and know when to come off that orbit Also it must be able to identify regions of state space where feedback control will be effective

Biopolymers for Medical Applications Juan M. Ruso, Paula V. Messina, 2017-02-17 This book presents an experimental and computational account of the applications of biopolymers in the field of medicine Biopolymers are macromolecules produced by living systems such as proteins polypeptides nucleic acids and polysaccharides Their advantages over polymers produced using synthetic chemistry include diversity abundance relatively low cost and sustainability This book explains techniques for the production of different biodevices such as scaffolds hydrogels functional nanoparticles microcapsules and nanocapsules Furthermore developments in nanodrug delivery gene therapy and tissue engineering are described
