

5. How to Operate the Forwarder

5.1 Operation

The TMC[®] control system is used for controlling the loader and the hydrostatic power transmission of the forwarder, as well as the auxiliary functions related to the loader and the hydrostatic power transmission.

When operating the machine in an ordinary manner, the TMC display is in the run-time mode and it shows you data that is necessary for work.

For the instructions for the adjustment of parameters related to the operation of the system, see the TMC instruction manual.

5.1.1 Function of Seat Safety Switch

The activation of the seat safety switch is a prerequisite for all other functions. What this means is that no function can be engaged before somebody sits on the seat. When you are operating the cruise controls, articulated frame steering, or the pedal, you can stand up for a moment and the operation will not be interrupted, but the TMC system will sound an alarm together with instructions displayed on screens. When you are sending a new control input you have to sit on the seat.

5.1.2 Emergency Stopper

The emergency stopper (1) is in the right side panel. If the knob is pushed down the engine will stop, all functions of the machine will terminate, and the parking brake will be engaged. The emergency stopper can be released by turning the knob clockwise.

5.1.3 How to Operate the Loader

The loader can be operated if:

1. The operator sits on the seat.
2. The parking brake has been released.
3. The loader has been engaged.

If these conditions have been met, the loader is automatically engaged when the seat is turned to face the rear of the machine. If the seat faces the front of the machine, the loader can be activated if necessary by means of the loader switch in the right-hand side control panel.

The loader can always be used when the TMC display shows the loader symbol.

It is also possible to move the machine while operating the loader.

For instructions for safe and efficient loader operation see the chapter on loader instructions (10).
