Fluvial Tidal Sedimentology 68 Developments:

Fluvial Meanders and Their Sedimentary Products in the Rock Record (IAS SP 48) Massimiliano Ghinassi, Luca Colombero, Nigel P. Mountney, Arnold Jan H. Reesink, 2019-01-22 The sinuous form and peculiar evolution of meandering rivers has long captured the imagination of people Today meandering rivers exist in some of the most densely populated areas in the World where they provide environmental and economic wealth and opportunities as well as posing hazards Through geological time the ancestors of these modern meanders built deposits that are now host to mineral resources groundwater and hydrocarbons This Special Publication illustrates the breadth of current research on meandering rivers and their deposits The collection of research papers demonstrates the state of science on fluvial process product relationships The articles cover fundamental and applied studies of both modern and ancient rivers are based on state of the art technology include complementary philosophical approaches and span a wide range of spatial and temporal scales This book includes some of the most recent advances in the study of the morphodynamics and sedimentology of meandering rivers and is an important resource for those who want to investigate fluvial systems and their deposits *Sedimentary Structures* John Collinson, Nigel Mountney, 2019-02-14 Completely revised new edition in colour for the first time of an established textbook in sedimentology Bedding Surfaces: True Substrates and Earth's Historical Archive N.S. Davies, A.P. Shillito, 2025 Bedding surfaces are innate to the fabric of sedimentary successions This Special Publication provides new perspectives on these familiar features exploring the differentiation of depositional and diagenetic bedding the time significance of surfaces the significance of true substrates preserved interfaces of lithosphere and hydro atmosphere and palaeoecological and palaeoenvironmental case studies Meandering Streamflows: Patterns and Processes across Landscapes and Scales A. Finotello, P.R. Durkin, Z. Sylvester, 2024-10-02 Meandering patterns shaped by fluid flows are found over a broad range of landscapes from bedrock channels to rivers and estuaries deep marine environments supraglacial streams and other planets such as Mars and Venus During the last six decades meanders have been widely investigated by researchers from different fields such as fluid mechanics geomorphology ecology civil and petroleum engineering and geology This volume seeks to push the science of meandering forward by bringing together insights gained from field laboratory and numerical investigations of meandering streams found in distinct environmental and geological contexts The authors pay particular attention to the interactions between autogenic and allogenic processes that affect meander kinematics and the resulting morphology sedimentology and stratigraphic architecture The findings presented in this volume contribute to a better understanding of stream meandering in diverse settings with broad implications for stream and wetland restoration land management infrastructure design oil exploration and production carbon sequestration hazard mitigation and planetary palaeoenvironmental reconstructions **Clastic Tidal Sedimentology** Derald G. Smith, 1991 **Fluvial-Tidal Sedimentology**, 2015-11-26 Fluvial Tidal Sedimentology provides information on the Tidal Fluvial

Transition the transition zone between river and tidal environments and includes contributions that address some of the most fundamental research questions including how the morphology of the tidal fluvial transition zone evolves over short days and long decadal time periods and for different tidal and fluvial regimes the structure of the river flow as it varies in its magnitude over tidal currents and how this changes at the mixing interface between fresh and saline water and at the turbidity maximum the role of suspended sediment in controlling bathymetric change and bar growth and the role of fine grained sediment muds and flocs whether it is possible to differentiate between fluvial and tidally influenced bedforms as preserved in bars and within the adjacent floodplain and what are the diagnostic sedimentary facies of tidal fluvial deposits and how are these different from pure fluvial and tidal deposits amongst other topics The book presents the latest research on the processes and deposits of the tidal fluvial transition documenting recent major field programs that have quantified the flow sediment transport and bed morphology in tidal fluvial zones It uses description of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition Presents the latest outcomes from recent large integrated field programs in estuaries around the world Gives detailed field descriptions outcrop borehole core contemporary sediments of tidal fluvial deposits Accesses new models and validation datasets for estuarine processes and deposits Presents descriptions of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition

The Neuquén Basin, Argentina Gonzalo D. Veiga, 2005 The Neuquen Basin of northern Patagonia provides an excellent case study in basin analysis and sequence stratigraphy The basin is one of the largest petroleum provinces in South America and includes a dramatic record of relative sea level changes as well as a unique and globally important palaeontological record Understanding this region is also central to unravelling the history of the Andes The latest developments in the study of the area have been combined in this volume to give an integrated series of case studies that document the structural igneous sedimentological and palaeontological history of the region from the Triassic to the Recent This publication provides an introduction into this fascinating region as well as a resource that includes the most complete and up to date studies of the area
